## Presence and Utilization Captured and Measured via Mobile with Geofencing

Forum now leverages Android mobile devices (iOS coming soon!) to gather actual people presence when the device enters a location's Geofence, giving the organization the data it needs without the User taking any action other than showing up for work.

The data from this actual presence information:

- Delivers easy, effortless, and automatic "check in" to rooms or workspaces
- Adds accuracy to your utilization measurements with yet another independent source of presence data
- Finds colleagues in the office and their seat location
- Improves contact tracing compliance

Improved user experience with new time range selector on floorplan view

Easily find the best place to work or collaborate on the floor plan for specified time ranges. Availability hot spots update as the time frame is adjusted.

Easier SAML Setup with "Friendly" URLs

The SAML configuration in the mobile app will now include the ability to use a "friendly" URL.
