

Updates to the Forum iOS Mobile App

SAML Log In

SAML log in is here! Now you can use a single set of credentials across all of your applications. Easy, secure access to Forum helps you love where you work, right from your iPhone or iPad.

Improved Design and Navigation

We've improved the design and navigation throughout the app, from quick access icons on the home screen to filters for just the right room to meet your needs. Asset icons display amenities and attributes at-a-glance while floor plans and location details help you locate the space and find your way there.

Searchable reservation screens deliver past and present bookings in seconds, taking the headache out of reservation management.

If you've searched for a space, you can easily access the floor plan view, map, or list view from the bottom of your screen.

Plus, you can customize your profile and preferences, right in the app.

QR Code Capabilities

Interested in reserving or claiming a room or desk that quickly, or one that doesn't have digital signage? Scan a QR code to instantly see details and availability, then claim it on the spot.

Seamless Experience within a Geofence

Making a reservation within the asset location's Geofence? If the reservation is for today and requires check-in, the app will automatically ask if you'd like to check in now.

In short, we took your feedback and delivered performance in an app that brings the connectivity and flexibility of Forum web to your mobile iOS device. Come see why Forum is the leading SaaS workplace management solution!
