

FORUM ANDROID & IOS MOBILE APP UPDATE RELEASE NOTES | November 2021

UPLOAD PROFILE PICTURES

Users can now upload profile pictures directly from their mobile app. Most photos are more available on mobile phones as people typically take pictures with their phones, so this new feature will make it much easier for users to update their profile images as needed.

MAKE RECURRING RESERVATIONS

Just as you can make recurring reservations in the Forum web application, you can now create and manage these in the Forum Mobile Apps. Simply select “Recurring” when selecting the date and time on the Search screen to find an asset that is available on all dates of your recurrence.

IMPROVED FLOORPLAN SEARCH EXPERIENCE

Floorplans are now easier to view and book on the smaller phone-sized screens as the maximum scale value for floorplan images was increased.

For a more intuitive experience, the time slider on the Floorplan View now defaults the start time to the current time or 8:00AM, whichever is later, and the end time to 6pm or the current time, whichever is later.

ADDITIONAL EASE OF USE AND STREAMLINED EXPERIENCE UPDATES

When making a same-day reservation that requires check-in, if the space is not already in use, the user will be asked if they wish to start the meeting. This reduces the number of clicks and logins, and provides an immediate way to confirm presence for the reservation.

When using the search function, all Filters can now be cleared at once making the experience easier for those who need to quickly remove or change their search criteria.

To make accessing the app easier for those who use SAML login, the URLs are no longer case sensitive.

To provide easy access to additional information, the mobile apps now include an About page for the app version, Privacy Policy and Terms of Service.
